RESEARCH INTERESTS

My current post-doctoral research focuses on advancing the practical applications of Generative AI (GenAI) with an emphasis on enabling large language models (LLMs) to exhibit human-like social behavior in controlled experimental settings. My work specifically aims to enhance the personalization, explainability, interpretability, and robustness of LLMs in social contexts, with an eye toward real-world applicability in varied social interactions.

During my doctoral studies, I concentrated on the domain of data mining, natural language processing, and machine learning, with a specific focus on low-cost information extraction using minimal supervision. My research tackled the scarcity of labeled textual data by developing methods that significantly streamline the annotation process, minimizing human input while ensuring cost-effective, accessible solutions compatible with everyday systems. This focus on efficient, budget-friendly approaches has been central to my research philosophy.

I have authored eleven papers published in leading conferences such as ACL, UAI, SIGKDD, PAKDD, SIAM, and ESEC/FSE, along with notable workshops, including ICLR, WWW, PAKDD, RANLP, and the ML Reproducibility Challenge. With additional papers under review, I remain committed to pushing the boundaries of knowledge in these domains.

EDUCATION

University of Michigan — Ann Arbor, MI, USA
PostDoctorate Fellow — *Sep 2024 - Sep 2026 (expected)*
- **Research Area:** Social Science, Data mining, Machine Learning, Natural Language Processing
- **Mentor:** Dr. David Jurgens and Dr. Lu Wang

Iowa State University — Ames, IA, USA
Ph.D in Computer Science — *Aug 2020 - Aug 2024*
- **Research Area:** Data mining, Machine Learning, Natural Language Processing
- **Advisor:** Dr. Qi Li

State University of New York at Buffalo — Buffalo, NY, USA
M.S in Computer Science — *Aug 2018 - July 2020*
- **Research Area:** Data Mining, Machine Learning, Natural Language Processing
- **Advisor:** Dr. David Doermann
- **Thesis Title:** Using Machine Learning for Predicting Aspect-Wise Satisfaction Ratings by Semantic Analysis of Text

West Bengal University of Technology, Kolkata — Kolkata, WB, India
B.Tech in Electronics and Communication Engineering — *June 2011 - May 2015*

HONORS AND AWARDS

- **DAIR3 Program (Mississippi):** Selected for the Data and AI Intensive Research with Rigor and Reproducibility (DAIR3) program with a full scholarship, to be held at Jackson State University in Jackson, Mississippi. (March, 2025)

- **DAAD AInet fellowship (Germany):** Selected as a DAAD AInet fellow for the Postdoc-NeT-AI, where I will be participating in the virtual networking week along with

organizational support for a one-week networking visit to Germany and the opportunity to apply for short-term research funding to conduct research at a German institution. (October, 2024)

- **MINK WIC Conference Poster Competition:** Best Research Poster Award for my paper "Zero-shot Approach to Overcome Perturbation Sensitivity of Prompts" (accepted at ACL, 2023) at MINK WIC Conference. (October, 2023)

- **MINK WIC (Missouri, Iowa, Nebraska, Kansas Women in Computing):** Selected to represent Iowa State University at MINK WIC (An ACM celebration of Women in Computing). (October, 2023)

- **Guest Lecturer Invitation:** I have taught a graduate-level course at Iowa State University as a guest lecturer for COM S 571X (Responsible AI: Risk Management in Data Driven Discovery.) to teach the students about representation learning, transformer models, and future research directions to develop trustworthy machine learning methods for natural language processing.

- **Research Presentation Competition:** Second place at the 7th Annual Research Day Competition in the Computer Science Department at Iowa State University. (May, 2023)

- **Grace Hopper Celebration:** Selected to represent Iowa State University for the prestigious and competitive Grace Hopper Celebration. (September, 2022)

- **Travel Award:** One among 46 students selected by SIGKDD for the student travel award among all the applicants. (August, 2022)

- **Research Presentation Competition:** First place at the 6th Annual Research Day Competition in the Computer Science Department at Iowa State University. (May, 2022)

TEACHING

Teaching Assistant

Iowa State University   *Ames, IA, USA*

COM S 309 - Software Engineering Practises   Fall 2020, Spring 2021, Fall 2021 and Spring 2022

- This is a core, mandatory undergraduate course that introduces methods for managing software development and developing a large software from scratch to the end product with Android client, Spring back-end, concurrent features, etc.
- I have graded, and closely supervised 10 project teams (40+ students) from a class of 300+ student.
- In three out of four semesters, my supervised teams won the best project award in the whole class.

COM S 363 - Introduction to Database Management Systems   Spring 2022 and Fall 2023

- This course is an undergraduate course covering basic topics of database systems.
- I created, mentored, and graded the Assignments/Quizzes/Exams of the students in this course and others.

COM S 227 - Object Oreinted Programming   Spring 2023

- This course is an undergraduate course covering basic topics of Object Oriented Programming. I worked as a head teaching assistant for this course.
- I created, mentored, and graded the Assignments/Quizzes/Exams of the students in this course and others.

WORK EXPERIENCE

Data Science Intern   May 2023 - July 2023
Home Depot   *Atlanta, GA, USA*
  * I worked on building a **sentence-based transformer personalized search ranker** using personalized signals to drive better engagements.
  * The current search ranker in production uses a **tree-based model** which does not catch semantic similarity between the search query and product and does not consider personalized information about the customers. Therefore, the need was to create a generalizable modeling framework that can handle multi-modality and understand the correlation between different customers to mitigate the cold start problem.
  * The proposed model improved MAP@8 by 20.38% MRR@8 by 21.27% NDCG@8 by 16.31% compared with the PROD baseline. Thus, improved relevancy for top-ranked products (i.e., higher precision).

Data Science Intern   May 2022 - Aug 2022
Epsilon Data Management, LLC   *Chicago, IL, USA*
  * The current production system uses **Spark SQL**, which does not support atomic operations like **upsert, delete**, etc., so the system overwrites the entire table for every update, resulting in higher resource consumption and time.
  * **Apache Hudi** is proposed as an alternative tool to solve issues like upsert and delete operations. We tested multiple workflows using Apache HUDI, including parameter tuning to validate its effectiveness by testing real-life scenarios with 1 billion data for up to 10% upsert operations, and the result shows a 37% increase in run time compared with Spark SQL.

Data Science Intern   May 2021 - Aug 2021
Epsilon Data Management, LLC   *Chicago, IL, USA*
  * The ability to accurately classify individual names plays a crucial role in the quality of the final product. Yet this ability is hampered due to heterogeneity in data collection and validation.
  * Current production methods validate the name data using **rule-based approaches**, limiting its ability to update or scale. Therefore, to alleviate this problem, we propose using **machine learning algorithms** on top of rule-based features and encoded features with 191 million data.

  * Based on the classifiers' performance, **Random Forest** achieved a 91% F1 score with **oversampling** and **customized features**, explaining the need to incorporate better features to help the learning model better and faster.

Data Analyst Intern   May 2019 - March 2020
Delaware North   *Buffalo, NY, USA*
  * Worked on training a **Logistic Regression model** to predict passenger occupancy across the US Airport and used its prediction to train another Logistic Regression model that predicts the number of transaction counts and labor force needed during various days in various kiosks or restaurants across airport terminals.
  * Worked with **Beautiful Soup** to web scrape data like attendance, duration of the game, home and opponent team details, and other details for the games like NBA, NHL, NFL, and MLB from their official website, and used the data to train a **predictive model** to understand the trend of the crowd for all these games.

Engineer   Sep 2015 - Dec 2017
Ericsson India Global Pvt. Ltd   *Mumbai, MH, India*
  * Two years of work experience as an Engineer in an **agile environment** with hands-on experience in designing and implementing Machine Learning Algorithms.

* Utilized alarms to perform **Anomaly detection** that captures unusual site behavior of base stations via **supervised and unsupervised machine learning models**. The developed models significantly reduced the alarms by 30%. The models helped prevent the faults from happening through early predictions and proactive decisions.
* Developed a **regression model** to identify the cause of weak network connection by performing a descriptive analysis to gain insights into the dataset, summary statistics, and analyzing features impacting the target correlation among variables. The developed regression model achieved a 10% more precise prediction than the previous year.
